

■ About Us

Our company / Company overview

Technosuite Limited is an integrated communication, automation and security applications company. Founded on the principle that cutting edge technological advancements will continue to be a key driver to the way businesses are done.

As such **Technosuite Limited** is positioned to leverage cutting edge technologies using very skilled personnel in partnership with technology companies with extensive background in research and development, since it is impossible to innovate alone.

Our mission / Mission statement

Technosuite Limited offers cutting edge technologies integrated to deliver excellent value to individuals and businesses.

In the discharge of our mission, the following shall be our focus:

To our customers:

Value shall come by way of superior products and services.

To our stakeholders:

Superior returns on investment.

To our employees:

Reward, encourage, train and properly assign all personnel so that their lives and jobs shall be meaningful with dignity, satisfaction and purpose on and off the job.

To the community and society in general:

Be a good citizen in each community by exercising all available safeguards to improve the environments in locations where we do business.

Our services / Service overview

Our services are offered with skilled high tech personnel in conjunction with technical expertise of our strategic partners who also have extensive R & D backgrounds to deliver excellent returns on investment through integrated and stand alone multifunctional applications.

- Development • Engineering • System design • Site/Asset audit
- Installation • Consulting • Training • Technical support

■ Applications

Technosuite Limited delivers convergent and stand alone solutions with focus on an open architecture management platform capable of integrating analogue and digital devices. Our ability to recognise and collaborate with leaders in systems integration, hardware, software and communication helps us to deliver excellent integrated platforms.

Communication

PBX – Private Branch exchange

This telephony system enhances communication in an organisation by providing a platform for voice conversations between staff at no airtime cost. External lines (wire line or wireless) are integrated and can be directed to any of the parties on the extensions.

IP – PBX

This is the next generation of PBX based Voice Over Internet Protocol (VOIP). It offers tremendous benefits by consolidating data and voice capabilities to a single network for any organisation with multiple locations. This network links the branches/remote offices as intercoms thereby greatly reducing operating telephony costs.

Public address system

Our specialised public address system is available for implementation in airports, train stations, multi layered buildings etc. The system is required to create a viable platform to communicate with everybody within listening range. Our unique mode of operation supported by extensive deployment experience delivers excellent value to our clients.

Automation

With the mission to leverage cutting edge technologies to impact on the way businesses are done, we have built capacity to deliver automated systems to our clients to reduce people factors and human intervention in process management, control systems and data acquisition in manufacturing, oil and gas, energy, building management systems and other industrial sectors where automated systems are important.

- Remote operating systems
- Remote monitoring systems
- Automated data acquisition
- Asset tracking and positioning

These are several automation platforms integrated with optimum Programmable Logic Controllers (PLC) manufactured by top rated R & D technology companies using first class innovations and standards leveraged with the best available communication infrastructure.

Security applications

CCTV (Closed Circuit Television)

Our deployments enables a 24 hour monitoring of designated centres to detect intruders or maintain an all the time surveillance in and around buildings or sites thereby creating a platform for alert in an emergency and permanent record of events on the other hand. Our technically skilled personnel deliver good value using the best hardware within reasonable budgets

■ Applications

Key benefits include;

- Enables 24 hour monitoring of designated centres
- Detects intruders in industrial and commercial break in
- Replaces or reduces manned guards
- Supplements manned guarding making them more efficient
- Provides visual confirmation of intruders activating an alarm
- Monitors remote unattended sites
- Health and safety of individuals on the premises or site

In general terms the list of usability is endless.

Digital video recorder

We deliver digital storage solutions to provide a management platform for visual images from cameras across multiple locations according to your needs for audio/visual surveillance and administration in live and recorded scenarios. The IP based technology is delivered with our unique competence and capacity.

Motion detection / Intrusion detection

Recognising vulnerability of commonly used detectors, we have carefully surveyed and researched the technology market to identify products with combination technologies of PIR, microwave, anti masking and waterproof sensors for highly reliable movement detectors. Your security needs in intrusion and movement detection are enhanced by abilities to handle masking with spray paint or stickers.

Access control

Our access control architecture are based on our client's current and future needs to meet stringent requirements and business rules. Every business needs a safe and controlled environment.

Fire and smoke detection

There are 2 main types of smoke and fire detectors, photoelectric and ionisation detectors. Photoelectric detectors look for the presence of visible by products of combustion while ionisation detectors work on a different principle by responding to invisible by products of combustion. Our extensive research and expertise positions us to deliver the best combinations depending on property and industry grouping.

Control & Monitoring Centre

Our Control and Monitoring Centre is a turnkey central management system integrating multiple components of automation and security. The system is designed to control and monitor remote locations by leveraging on best communications infrastructure to integrate multiple components such as access controls, intrusion detectors, CCTV, digital video recorders, perimeter security, Programmable Logic Controllers (PLC), SCADA systems and building management systems. This centralized system affects the bottom line by greatly reducing personnel cost and increasing productivity.

■ Industrial Focus

Our market / Industrial focus

- Banks
- Petroleum
- Manufacturing
- Airports and ports
- Others

Banks

Technosuite Limited delivers ability to leverage cutting edge technologies with existing infrastructure for

- Effective central management of multiple remote/branch offices and ATMs
- Convergence of voice, video and data
- Reduction of telephone cost
- Risk mitigation against internally and externally motivated crimes
- Reduction of security personnel requirements
- Enhanced management value to the bottom line

Petroleum

Oil and gas, refining and processing are component sectors of the petroleum industry that we target.

- Efficient communication
- Process management
- Data collection
- Security of installations
- Pipeline security
- Personnel safety

These are key requirements in this industrial sector for successful operations.

Technosuite Limited in conjunction with our technical partners has expertise and competence to deliver convergent and stand alone cutting edge solutions.

Manufacturing

- Automation of production lines
- Warehouse conveyor systems
- Voice communication
- Surveillance
- Remote monitoring of production floors

These are areas with in our field of competence for which manufacturing plants need continuous improvements to increase efficiency and enhance overall bottom line.

Airports and Ports

Globalisation means that drugs, crime and terrorism travel making it imperative that airports and seaports facilities possess intelligent physical security platforms integrated to provide comprehensive solutions.

Technosuite Limited delivers cutting edge integrated systems covering

- Live and recorded video
- Intercom
- Public address systems
- Access control
- Perimeter security

Deployments accommodate pre defined business rules for the safety and security of assets, passengers and personnel across the entire facility.

Industrial Focus

Others

Technosuite Limited delivers cutting edge technology for

- High rise buildings
- Hotels
- Healthcare
- Educational
- Telecommunications
- Power plants • Enterprise facilities

Our solutions are in the areas of stand alone or integrated surveillance systems, access control, communications, intrusion detection, perimeter security, intercom and building management systems and automation with the ability to leverage legacy and digital technologies into a central management platform within scalable open architectural frame for immediate and future needs.

■ Board & Management

Our people / Board and Management.

Our Board and Management teams are made up of people driven by great ideas, plenty of energy and strong spirit of entrepreneurship.

V.O. Ojomo

A physicist, computer scientist and retired general of the Nigeria Army, he has passion for innovative technologies and his extensive military experience comes to fore in creating visionary leadership for the company as Chairman of the Board of Directors.

Kayode R. Adeoti

A graduate of the University of Ilorin, his working and predominantly technical and marketing experience spans 15 years. He is dynamic, fast learner, resilient, passionate, an avid reader and highly visionary. He has requisite attributes of an entrepreneur and with special skills for problem solving and breaking new grounds. He has undergone numerous business and technical courses at home and abroad as the Chief Executive of the company

Babatunde Gabriel

An electro-mechanical engineer with early experience in electronics and communications. He has excellent hands on experience in project management and an ever increasing crave for cutting edge technologies. He has been in the market place for over a decade. He serves as the Chief Technical Officer.
